Vilans

Background

E

;-

X

- Increasing calls for client-centered care...
 - by attending to the welfare, needs and values of clients
- Increasing calls for care professionals capable of delivering such care.
- Nursing training programs (in the Netherlands)...
 - focus mainly on 'technical' nursing skills...
 - and far less on social skills (Hamers et al., 2012; Oeseburg et al., 2015)

Goals of a new nursing training program

- A personalized and flexible training program, following students' needs (learning questions).
- Relation-oriented training: students attending to individual clients' welfare, needs and values.
- Combing in-school and on-the-job training: close co-operation and alignment between vocational training institutes and care organizations.

Goal of the present study

- Study the implementation and coordination process of the program.
- By focussing on the alignment...
 - between the different organizations participating in the program,
 - and within these organizations.

#EHMA2020

•

Methods / data

In-depth interviews with:

- 3 project leaders
- 8 on-the-job trainers in nursing homes
- 4 team managers
- 3 educators from vocational training institute
- 7 students

Online questionnaire with open questions:

• Completed by 14 students.

Observations during:

- Meetings between project leaders and project management;
- Meeting for new students

Results

Paradoxical dynamic

Wide support for programs' goals, but suboptimal relationships and lacking communication between on-the-job trainers and in-school educators.

Suboptimal implementation

- Misalignment of tasks and responsibilities within and between organizations...
- raised questions about 'ownership' of students' training in each organization...
- inhibited employees' to align their work with external partners...
- hampered the envisioned flexible adjustment to students' needs.

Discussion / conclusion

Challenges of implementing a new training program that combines in-school and on-the-job learning.

Successful implementation requires...

- *intra*-organizational alignment <u>and</u> *inter*-organizational alignment...
- prior and throughout implementation process.

Role for managers...

- Engage staff in program development.
- Align roles and perspectives within organization
- Facilitate and stimulate staff to coordinate and align work with external partners.

Thank you for your attention!
